

# SME Package Cybersecurity

Take advantage of our support to benefit from government cyber subsidies!

## What is the SME package Cybersecurity ?

SME Package - Cybersecurity is a government aid program that enables SMEs to obtain financial assistance to implement tools to strengthen protection against cyberattacks, comply with the NIS2 directive, and facilitate the implementation of cybersecurity technologies and procedures. The government provides 70% of the funding for projects between €3,000 and €25,000. Reimbursements are made by the government to the company between one and two months after invoicing, which means that cash flow is not tied up for too long.

A company can benefit from one SME package per year and combine up to seven packages over a three-year period (for example: obtain an SME Cybersecurity package in the first year, combined or not with another SME package (Digital, AI, Sustainability), then undergo another assessment to benefit from a new cybersecurity package the following year).

## Why turn to Rsecure to obtain financial support?

Government processes are not always easy to understand and comply with, so we put our experience and expertise at your service to help you complete your application files and get them approved by the relevant authorities.

Our assistance includes:

- ◆ **Identifying** eligible cybersecurity assistance for your needs.
- ◆ **Support** in creating your application file.
- ◆ **Defining** the solutions to be implemented to strengthen your cybersecurity posture.
- ◆ **Implementing** the project approved by the supervisory bodies.
- ◆ **Supporting** your company in keeping pace with developments in cybersecurity.
